JagPDF is a fast and lightweight C++ library that provides a powerful, convenient PDF printing and importing application. It provides a complete PDF preparation/printing solution for developers. JagPDF is simple and easy to use. To use the library, developers just need to include the jagpdf.h header file in their source code and invoke the 3 methods (open, startpage and setfilename) of the jagPDF class to start printing and reading PDFs. The library is free for commercial use. It can be used in commercial applications such as.NET and Java applications and it is based on a well-designed and tested code. In addition, the jagPDF library provides a high level of document management, including various template classes and widgets. The jagPDF framework can import and export PDF files, and use its own built-in template language for new document creation. You can import or export to or from several formats, including simple text, rich text with tables, graphics and images, as well as Adobe Portable Document Format. You can also use the library to read or write PDFs using most common software formats. It also provides a user-friendly GUI with an easy-to-use documentation in the form of a set of tutorial and reference manuals. Implementations: - MSVC - MinGW GCC - GNU-G++ - GNU-GCC - Mac OS X For further information, visit the project's web site. How to use JagPDF: Open your application and include the jagpdf.h header file, then Call jagPDF::open(); Call jagPDF::startpage(); Call jagPDF::setfilename(); For more information on the library, check the jagPDF documentation and PDF file format specs. Documentation: Visit the JagPDF Project web site for a complete documentation of the library. Download: You can download the latest version of the library by visiting For the sources and binaries, visit: Additionally, you can download the latest release of the DLL or the EXE from the sourceforge.net project. What is JagPDF? A modern C++ library to read and write PDF documents on Mac OS X, including versions of Mac OS X prior to Snow Leopard (Mac OS X 10.6). JagPDF is based on open source reference project: it uses the reference PDF SDK from IText, but is based on more modern C++ library. JagPDF is written in C++, and this means it does not need to reference the dynamically loaded libraries of Mac OS X. It also means that it is very fast and safe to use. Tutorials for JagPDF: Download the latest version of JagPDF from the official site Tutorials for Mac OS X 10.6 Snow Leopard: Mac OS X 10.6 Snow Leopard is the last version of Mac OS X to still use the PowerPC CPU architecture and the ancient Mac OS
