
KMS Tools For Windows And Office All Versions

you can activate a volume license for office 365 or office 2013 by selecting the migrate and activate option. you can also activate a volume license for office 2016 by selecting the migrate and activate option. when you install kms, you must also install the microsoft office volume license pack for kms. this small package (about 400 kb) contains the files necessary for kms to be able to receive and process activation requests from ms office clients. depending on the version of office that you plan to use, you must download and install the correct version of the volume license pack: as usual, you must have an executable (e.g., microsoft office 2013) available on your client computers in order to perform a kms activation. if your organization is using an oem version of office, you must have an oem version (e., office 2013 enterprise) installed on your computers. however, we strongly recommend that you install the retail version of the software (e., office 2013 enterprise) in order to activate kms. after installation, open the kms console and click on the tools button to activate the software. after that, the software will be available to the users of the server. in this case, we will provide the following list of tools that are available for you to activate the installed microsoft office 2013: `cscript keymgr.vbs cscript keymgr -w cscript keymgr -w -p` kms tools for windows and office all versions this step may take some time to complete. if the kms tools shows that the office license is not active, then the file `cscript keymgr.vbs` does not exist or it does not have correct values.
