Social problem solving essay on Kannada a story about Joseph and Joseph and who to visit in your thesis statement for compare contrast essay on friendship Harry Styles and Donald Trump. This is a user's guide to help with the following article about Harry Styles: Essay Printable: I'll be watching Harry Styles perform in Köln, and taking a .The epidemiology and risk factors of chronic kidney disease among ethnic Chinese in Singapore: a cross-sectional study. There are racial differences in the rate of kidney disease, but few prospective studies have examined this difference. Our objective was to investigate the risk factors for chronic kidney disease (CKD) among ethnic Chinese in Singapore. The Singapore Chinese Health Study was a cross-sectional study to identify risk factors for CKD. Its design has been described in detail previously. Participants were 1,970,581 community-dwelling ethnic Chinese aged 40 to 79 years. Of the participants, 26.4% had previously diagnosed diabetes mellitus, 12.5% reported a history of hypertension, and 3.6% were on treatment. CKD was diagnosed using combined serum creatinine and estimated glomerular filtration rate. CKD was more common in men (27.7%), the elderly (43.2% at ≥ 70 years), and participants with diabetes mellitus (39.6%), hypertension (35.4%), and hyperlipidemia (23.8%). The prevalence of CKD was greater in participants with diabetes mellitus (22.4%) compared with those without diabetes (16.4%) and among those with hypertension (20.9%) compared with those without hypertension (14.3%) ($P < 0.001$). The prevalence of CKD was greater among participants with diabetes, hypertension, and hyperlipidemia (diabetes mellitus or hypertension or hyperlipidemia) compared with participants without those conditions (17.4% vs. 16.4%; $P < 0.001$). A greater proportion of CKD cases among those with diabetes mellitus (25.7%) was attributable to diabetes mellitus (12.7%) compared with CKD without diabetes mellitus (15.0%). Participants without diabetes mellitus, but with CKD, had a higher body mass index than participants without CKD
